

How To Read Your Water Meter.

The water bill will show a consumption charge for the total number of kiloliters you have used over the last month.

As you are being charged according to the amount of water you use, it is a good idea to know how to read your meter and read it regularly.

Your water meter tells you exactly how much water you are using. Generally, water meters are located just inside the boundary of your property.

Water usage can be monitored by simply reading your meter on a daily basis. The odometer records usage in kiloliters (1000 liters).

Black numbers tell you how many kiloliters you have used;

Red numbers tell you how many liters you have used.
